

CUSTOM SOFTWARE

Software built around your *work*.

When spreadsheets, paper registers and WhatsApp groups stop keeping up, we build the system that replaces them — shaped around how your business actually runs, not how a product decided it ought to.

CRMS

DASHBOARDS

BOOKING SYSTEMS

INTERNAL TOOLS

MOBILE APPS

When the spreadsheet stops *coping*.

Everything is in a different place

Customer details in one file, bookings in another, payments in a third and the rest in a WhatsApp group. Nobody has the full picture, and something always slips through.

The same work, over and over

Copying figures between spreadsheets, sending the same reminders by hand, chasing the same updates every week. Hours nobody enjoys and nobody is paid to enjoy.

No clear view of the business

How many enquiries came in this month? Which service actually earns? Who is overloaded? Without a system you are estimating, and estimates get expensive.

It stops working as you grow

What held together at ten customers falls apart at a hundred, and it tends to fall apart during your busiest week rather than a quiet one.

The *systems*.

01

Custom CRM

One place for customers, patients or leads — history, follow-ups, notes and status, so anyone on the team can pick up where someone else left off.

LEAD & PATIENT RECORDS

FOLLOW-UP REMINDERS

NOTES & HISTORY

ROLE-BASED ACCESS

02

Dashboards & reporting

The business at a glance. Enquiries, revenue, staff load and whatever else you actually decide with, updated without anyone compiling it.

LIVE DASHBOARDS

SCHEDULED REPORTS

EXPORTS

TEAM PERFORMANCE

03

Booking & scheduling

Appointments, staff rotas, rooms, equipment or vehicles — booked without the double entry and the double booking.

ONLINE BOOKING

STAFF CALENDARS

REMINDERS

CAPACITY RULES

04 Internal tools

The small systems a team needs daily: stock, jobs, approvals, invoicing, checklists. Unglamorous, and usually the biggest time saving of the lot.

STOCK & INVENTORY

JOB TRACKING

APPROVALS

INVOICING

05 Mobile apps

For staff in the field or customers on the move. iOS and Android, taken through to the App Store and Play Store.

IOS & ANDROID

OFFLINE-FIRST

FIELD DATA CAPTURE

PUSH NOTIFICATIONS

06 The connective work

Secure APIs and databases underneath, joined up to the tools you already pay for rather than replacing every one of them.

APIS & DATABASES

PAYMENT GATEWAYS

ACCOUNTING & SHEETS

CLOUD HOSTING

Why not just buy something *ready-made*.

Sometimes you should

If a product already does the job, we will say so. Custom is worth it when your process is the thing that makes you competitive, or when nothing off the shelf fits without bending the business out of shape.

It fits how you already work

Your team does not have to relearn their job around somebody else's assumptions — which is usually why the last system quietly stopped being used.

You own it outright

No per-user fee that grows every time you hire, and no vendor deciding to discontinue the one feature your operation depends on.

It keeps being looked after

The people who built it are the people who maintain it, extend it, and answer the phone when something breaks.

START A CONVERSATION

Tell us where it currently *hurts*.

The quickest way in is usually to describe the part of the week that wastes the most time. We will tell you whether software fixes it, roughly what that takes, and whether it is worth doing at all.
