

WEBSITE AUDIT

Eight things that cost you *enquiries*.

A short review of an existing website against the eight issues we see most often. Each one is something a visitor reacts to without ever telling you about it.

What we *checked*.

- | | | |
|--------------------------|--|--------------------|
| ☐ | Mobile experience
Does it work properly on a phone — readable type, tappable buttons, nothing overflowing sideways? This is where most of your visitors are. | OK / NEEDS
WORK |
| ☐ | Loading speed
Uncompressed images and heavy page builders cost seconds. People leave before the page appears and you never know they came. | OK / NEEDS
WORK |
| ☐ | A clear next step
Is booking, WhatsApp or a phone number visible without scrolling and hunting? Interest fades fast when the path is unclear. | OK / NEEDS
WORK |
| ☐ | Current design
Does it look like it was built this decade? Fair or not, an outdated site suggests an outdated practice. | OK / NEEDS
WORK |
| ☐ | Structure & navigation
Can someone find what they came for in two clicks, or is everything buried under a vague menu? | OK / NEEDS
WORK |

Trust signals

OK / NEEDS
WORK

Credentials, reviews, real photographs, clear location and contact details. Their absence is felt even when it is not noticed.

Google foundations

OK / NEEDS
WORK

Titles, descriptions, structured data and a sitemap. Without them, Google struggles to show you properly.

Link previews

OK / NEEDS
WORK

When the link is shared on WhatsApp, does a proper card appear or just a bare URL? It affects whether anyone taps it.

What we would fix *first*.

PRIORITY 1

PRIORITY 2

PRIORITY 3

Anything *e/se*.

This audit is a starting point for a conversation, not a sales quote. Plenty of sites need one or two fixes rather than a rebuild, and we will say so when that is the case.
